Md. Mehedi Alam Nahi

GitHub | Linkedin | nahimehedi@gmail.com | +880 1531949342

Summary

Have hands-on experience building scalable **REST APIs** using **Node.js, Express.js**, and MongoDB.Experienced in responsive interfaces with **React.js**, **Next.js**, and **Tailwind CSS**, alongside state management and REST API integration. Focused on database optimization (Aggregation Pipelines, Indexing), secure authentication **(JWT RBAC)** and implementing full stack systems. Passionate about writing clean, maintainable code and solving problems across the stack.

Work Experience

Frontend Developer, Panjeree Publications Ltd. 01-09-2026 – Present

Trainee Frontend Developer, Panjeree Publications Ltd. 01-06-2026 – 31-08-2026

- Developed responsive, bilingual frontend interfaces using **Next.js App Router**, **React**, and **TypeScript**, including **i18n** (**next-intl**) with Bengali/English locale-based routing.
- Managed UI state using React **useState**, **custom hooks**, and **Redux Toolkit**, and built **reusable component architecture** based on **atomic design principles** with a **feature-based folder structure**.
- Created **dynamic product/order routes** and modeled application data using **TypeScript** interfaces.
- Implemented responsive UI with **Tailwind CSS** and **lucide-react** icons; integrated **REST APIs** using **TanStack Query**, handling caching and data-fetching states.

Technical Skills

Languages	JavaScript (ES6+), TypeScript, Python
Frontend / Frameworks	**React.js**, **Next.js** (App Router), HTML5, **Tailwind CSS**, Responsive Web Design, **Redux Toolkit**, **TanStack Query**, State Management, Custom Hooks, Reusable Component Architecture, Atomic Design, next-intl (i18n)
Backend / Frameworks	Node.js, Express.js, Mongoose ODM, **REST API**, **JWT**, Middleware Development
AI & Machine Learning	**PyTorch**, Data Preprocessing, Data Visualization, **RAG**, **LangChain**
Databases	MongoDB (Aggregation, Indexing), MySQL
Tools & Workflows	Git, GitHub, **Postman**, MongoDB Compass, VS Code, **WebStorm**, Kaggle
Core Concepts	Object-Oriented Programming (OOP), Data Structures (DSA)

Education

Bachelor of Science in Computer Science and Engineering, United International University (UIU)

CGPA: 3.16 / 4.00

Thesis: *Deepfake Voice Detection* : Developed a deep learning framework using PyTorch and Transformers to detect synthetic media artifacts by analyzing inconsistencies in audio features.

Selected Projects

E-Commerce Backend API github.com/mehedi-nahi/Ecommerce-API-Backend-Project

- Built a backend system for an e-commerce platform using **Node.js** and **MongoDB**, optimizing database schemas to handle high-concurrency requests efficiently.
- Implemented advanced product filtering via aggregation pipelines (`$lookup`, `$unwind`) and OTP-based password recovery using **Nodemailer** for enhanced user experience.
- Secured the API with **JWT authentication**, Helmet.js middleware and endpoint-level access controls to protect sensitive data and prevent unauthorized access.

Technology stack: Node.js, Express.js, MongoDB, JWT

Bariwala github.com/mehedi-nahi/Bariwala-Full-Stack-

(Full-Stack Property Rental & Marketplace Platform)

- Designed and deployed a production-grade **MERN** application covering the complete rental lifecycle of property listing, rental requests, invoice generation, marketplace, reviews and admin moderation with **four role-based access levels** (tenant, landlord, marketplace, admin).
- Built **45+ RESTful API** endpoints with **JWT** authentication via HTTP-only cookies, **RBAC** middleware and a structured invoice state machine (Pending → Paid / Overdue) featuring auto-expiry, transaction references and landlord-controlled due date extensions.
- Implemented **MongoDB $facet aggregation** for paginated property search with multi-field filters; and enforced multi-layer API security with **Helmet**, **HPP** and rate limiting.

Technology Stack: Node.js, Express.js, React 19, MongoDB, Mongoose, JWT

Portfolio Backend API github.com/mehedi-nahi/PortfolioAPI-Backend-Project

- Built a fully-featured RESTful backend for a personal portfolio platform using **Node.js** and **MongoDB**, with modular CRUD endpoints covering experiences, skills, blogs and contact messages.
- Implemented secure JWT authentication via HTTP-only cookies and rate limiting, HPP and MongoDB sanitization to safeguard all endpoints against common vulnerabilities.

Technology stack: Node.js, Express.js, MongoDB, JWT

Interests

Backend Architecture, AI & ML, Agentic AI, Generative AI, System Design, API Scalability.

Awards & Honors

1st Runner Up in **Capstone Project Competition**, United International University (2024)

1st Runner Up in CSE Project Show 2023 (Course: Advanced Object Oriented Programming) - Organized by United International University, Dhaka, Bangladesh

1st Runner Up in CSE Project Show 2023 (Course: Electronics) - Organized by United International University, Dhaka, Bangladesh
